DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
3. Claims 1-4 and 21-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim et al 7,085,798 (Kim) and Guttag et al 5,805,913 (Guttag).

Kim's Fig. 9 illustrates a plurality of selectors (sum circuits 96) including a multiplexing network (the circuitry that feeds a pair of values e.g. Oa and Ob) to the sense amplifier (sense amp). While Kim does not explicitly teach feeding the output of the adder to an ALU it is well known in the art to do so. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to add circuitry to Kim to feed the output of an adder to an ALU wherein it is summed with another number because Guttag shows just such an arrangement (Fig.

Art Unit: 2193

5 adder 226 and ALU 230. Also note that both Kim (claim 2) and Guttag (Fig. 1-3 and 5) implement their adder and ALU on an integrated circuit and that Guttag show a dynamic random access memory coupled to the integrated circuit (Fig. 1 and col. 10, lines 1-5).

Applicants' remarks are moot because the multiplexing network is being read on element 96, note elements 92 and 94.

Claim Rejections - 35 USC § 112

4. Claims 21-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 21, line 5; the phrase "the multiplexing network" lacks clear antecedent basis.

Allowable Subject Matter

5. Claims 7-20 are allowed.

6. Claims 5, 6, 29 and 30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2193

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
